M-900 High Temperature Rolling Table

FROM CONCEPT TO COMPLETION

Highlights

- The M-900 is designed to roll materials that require high temperatures to develop tack and drape, such as thermoplastic Prepreg materials.
- Infrared heaters to raise temperature of mandrel and material prior to rolling.
- Safe machine design, heated areas out of operator's reach.
- Computer controlled heating & rolling cycle for maximum consolidation.
- Heating and cooling capabilities within both upper & lower platens.
- High consolidation pressure.
- Flexible lower platen. Multiple pressure zone option.
